

ABSTRACT

This project presents the development of a Smart Weather and Power Consumption Monitoring System with Real-Time Control using MQTT, designed for efficient environmental monitoring and electrical energy management. Utilizing an ESP32-WROOM (38-pin) as the main controller, the system integrates sensors such as the DHT22 for temperature and humidity sensing, and the PZEM-004T for accurate voltage, current, power, and energy readings. Environmental and electrical data are displayed on a 20x4 I2C LCD and transmitted via MQTT to a smartphone-based MQTT Panel application. Real-time control of connected electrical appliances is achieved through a 2-channel relay module, enhancing user interaction and automation capabilities. Power is supplied through a 9V 1A transformer. This system is suitable for smart home applications, providing users with insightful, real-time data and remote-control options for better energy conservation and environmental awareness.

LIST OF CONTENTS

CHAPTER No.	TITLE	PAGE No.
	ABSTRACT	I
	LIST OF TABLES	II
	LIST OF FIGURES	IV
	LIST OF ABBREVIATION	V
1	INTRODUCTION	1
	1.1. Existing System	
	1.2. Proposed System	
	1.3. Overview of the Report	
2	LITERATURE SURVEY	4
3	PROJECT OVERVIEW	8
	3.1. Block Diagram	
	3.2. Circuit Diagram	
4	HARDWARE	12
	4.1 ESP32-WROOM-32 (38-Pin Module)	
	4.2 DHT22 Temperature and Humidity Sensor	
	4.3 PZEM-004T Energy Monitoring Module	
	4.4 LCD 20x4 With I2C	
	4.5 5v Relay Module	

4.6 12 1A Step Down Transformer
4.7 LM2596 Power Supply Module

5	SOFTWARE	51
	5.1 Arduino IDE	
	5.2 MQTT	
6	RESULTS AND OUTPUT	66
7	TESTING AND VALIDATION	68
8	CONCLUSION AND FUTURE ENHANCEMENT	70
